Table 2 Recommended Durability Requirements in AS 3600 (2001)

Surface and exposure environments	Exposure classification for reinforced concrete			
	Curing requirement			
	Class	Minimum strength (MPa) ^f	Initial continuous curing (days) ^g	Average strength at completion of curing (MPa)
In contact with ground				
(a) Members protected with damp-proof membrane	A-1	> 20	3	> 15
(b) Residential footings in non-aggressive soils	A-1	> 20	3	> 15
(c) Other members in non-aggressive soils	A-2	> 25	3	> 15
(d) Members in aggressive soils	U	–	–	–
In interior environments				
(a) Fully enclosed within a building, except during construction	A-1	> 20	3	> 15
(b) In industrial buildings, the member being subject to repeated wetting and drying	B-1	> 32	7	> 20
In above-ground exterior environments in areas that are:				
(a) Inland (> 50 km from coastline) environment being:				
i) non-industrial and arid climate zone	A-1	> 20	3	> 15
ii) non-industrial and temperate climate zone	A-2	> 25	3	> 15
iii) non-industrial and tropical climate zone	B-1	> 32	7	> 20
iv) industrial and any climatic zone	B-1	> 32	7	> 20
(b) Near-coastal (1–50 km from coastline) any climatic zone	B-1	> 32	7	> 20
(c) Coastal (up to 1 km from coastline but excluding tidal and splash zone), any climatic zone	B-2	> 40	7	> 25
In water				
(a) Fresh water	B-1	> 32	7	> 20
(b) Sea water				
i) permanently submerged	B-2	> 40	7	> 25
ii) in tidal and splash zones	C	> 50	7	> 32
(c) Soft or running water	U	–	–	–
In other environments				
Any exposure environment not otherwise described in the items above	U	–	–	–
Additional requirements for freezing and thawing exposure	Strength > 32 MPa and 40 MPa for occasional and frequent exposure respectively Air content between 8% to 4% for 10 to 20 mm nominal size aggregate, or 6% to 3% for 40 mm nominal size of aggregate			
Notes: 1. * Requirements for minimum compressive strength shall be based on tests of cylinders. 2. * Provisions will not apply for concrete cured by accelerated methods. However, average compressive strength requirement at the completion of accelerated curing will govern. 3. Where the compressive strength requirement of class C cannot be satisfied due to inadequate aggregate strength, concrete with compressive strength not less than 40 MPa may be used provided that cement content of the mix is not less than 470 kg/m ³ and cover required by clause 4.10.3 of AS 3600 is increased by 10 mm. 4. Permeable soils with a pH < 4.0, or with groundwater containing more than 1 g/l of sulphate ions, would be considered aggressive. Salt-rich soils in arid areas should be considered as exposure classification C.
